The Cassida 85 Currency Counter

Worn bills? No problem

When you are looking for a currency counter, selecting one that can handle old bills and new bills alike has obvious advantages. The Cassida 85 has been designed to handle all sorts of bills, ranging from crisp new bills, to those that are nearing the end of their lives. You can trust the Cassida 85 to adeptly process all bills, regardless of condition.

Durability, reliability and sturdiness

The Cassida 85 is only built one way, and that is tough. Those looking for a dependable bill counting system can be sure that the Cassida 85 is up to the job. Formed from durable steel parts and metal construction, the Cassida 85 has been designed from the ground up for years of high-throughput use. Bill counters need to be tough and reliable, just like the Cassida 85.

Superior protection against counterfeits

The Cassida 85 has been engineered to tackle counterfeit bills head on. Our incorporation of dual head MG (magnetic) and dual sensor UV (ultraviolet) detection systems ensures the ultimate protection against counterfeit bills. In short, the Cassida 85 has been designed to ensure that no counterfeit bills ever appear in your stack!

Enhanced user experience

The high capacity 1000 bill hopper and three-way selectable speed will ensure an uninterrupted and comfortable count even with the highest volume of currency.

With your well-being in mind, we developed a dust collector that helps reduce health risks associated with counting money by capturing air-blown dust and micro particles abundant on the bills. Smartly placed underneath the unit, the collector does not require any special care and does not interfere with any machine operations.

A built-in metal handle makes this sturdy and versatile unit easily portable around the office space or on outside trips.
